• Here at JAmodified, we specialize in the manufacturing of high quality forged aluminum pistons, for a large variety of engines. We combine light weight, high strength, precision machining and premium materials to build a part you can depend on for high horsepower, torque and reliability. We can design a custom piston for nearly any application and design it to your exact needs / specifications. For situations in which the engine is unusual, you may send us a sample piston outlining changes you desire in your new pistons. This will prevent confusion and assure that the correct pistons are manufactured.

• No extra "engineering" charge for special designs made from sample pistons, drawings, computer discs or emails.
